CRISTAL CRYOLIPOLYSIS

BODY CONTOURING + TIGHTENING

What makes it special?

Cristal Cryolipolysis is the first ever cryo-technology fat reduction in the country. It's a popular nonsurgical alternative to body sculpting options like liposuction, that freezes and destroys fat cells.

How does it work?

Fat will be measured by thickness and next step is the placement of cold-protection tissue and applicator to the treatment area. The procedure will then freeze, crystallize fat and flush them out of the body. Recommended for stubborn fatty areas.

How often should it be done?

Will depend on your current body condition and Doctor's assessment.

Where to get the treatment?

Our Cristal Cryolipolysis is available at The A Institute only.

Why do people love it?

- ✦ Non-invasive and no anesthesia required.
- ✦ Applicable to several ranges of treatment areas to target: chin, arms, bra folds, abdomen, saddle bags, thighs, knees, calves, and love handles.
- ✦ Patients love the short procedural time.
- ✦ One session can remove up to 30% of fat.
